Mike Bullard Show - CTV Broadcast - The Masonic Temple, Toronto, ON.

This was the first stereo TV broadcast that we did with the Holophone. The mics were placed in front of the front-of-house mixer extended into and above the crowd.

Sounds at the broadcast mixing desk were large (but stereo). We were attempting to mix straight Holophone for stereo - very nice stereo but no surround!

It is for this reason (amongst others) that we implemented our Holophone Virtual Surround monitoring system, which creates an instantaneous Holophone derived "virtual surround" stereo signal that is available at both the headphone and line outputs on our current PCM-7.

A great learning experience!
